

1. Overview

Project Name: TBD

Ultimate Goal:

Create some form of centralized feed that gathers financial data / trends in real time.

Key Features: (brain storming rn)

- Gather data through sources like X, (maybe kalshi) (in real time) (
 - Other potential data sources can be from videos / podcasts from certain people
 - Maybe track tweets from certain people
 - (hashtags)
 - Have a fyp
- Use a classifier model like jev
- Redis cache to store:
 - Recent stock trends
 - Market data
- Allow users to search about certain feature and maybe have some sort of RAG system
 - Examples:
 - User inputs: “give me recent data involving Nvidia”
- Maybe allow user to have alerts? (this could be good use of adding pub sub feature)
- Audio features
- MCP Server
 - (ex: voice → text → Action)
 - Keep an alert of blah blah blah
- General consensus
 - EVERYONE is talking about something
 - Oh we see a spike in this maybe u should look into it
- Track all reddit posts on WSB → spike in some stock
 - Everyone talking about micron before it booms

Solana API Use cases:

- Cool stuff: using solana for games (
- Agent wallets + payments (<https://www.lobster.cash/>)

Resources:

<https://www.mlh.com/partners/solana>

https://solana.com/skills?utm_source=mlh&utm_medium=referral&utm_content=Solana+Agent+Skills

Polymarket:

- All users / trades are public
 - Track whale trades → notification to keep track of incoming news

You can view public trades and real-time market activity on Polymarket directly [through the Polymarket Activity Feed](#). 

How Polymarket Public Trades Work

- **Real-Time Data:** The activity feed shows live, public orders and trades executed across all active prediction markets, displaying the user wallet, trade direction (Yes/No), amount, and timestamp.  Polymarket
- **US Access Restrictions:** Direct trading on the international [Polymarket](#) site is blocked for users in the United States, though U.S. users can check local alternatives or official regional portals like [Polymarket US](#). 
- **Historical Data Access:** Analysts and developers often pull public trade histories using the Polymarket API or community-built Python tools to backtest trading strategies and build price series.  Reddit · r/algotrading

If you are looking for specific information, let me know:

- Track relations between companies
 - EX: Tesla expanding self driving
 - Company that supplies LIDAR may go up
- Paper Trade (alpaca / solana)

paper_buy (TICKER / CRYPTO, AMOUNT, ...)
